Provide on loan basis (as long as operations services are utilized) chemical feed equipment.

Provide meter reading and billing service.

Assist with the preparation and filing of Missouri Public Service Commission documents and reports.

Attend DNR and Missouri Public Service Commission system inspections.

Provide accounting services using Quickbooks.

Advise and instruct Client's personnel regarding the operation of the Client's system.

Water Technology of The Ozarks

Public Water System Operating Service

786 Croley
P.O. Box 1080
Nixa, MO 65714
417 725-4141

Why Consider A Water Supply Operating Service?

The DNR requires that all public water supplies be under the supervision of a licensed operator.

No Chemical Handling. You don't touch a single container. We do all handling so there is limited chance of mishandling.

No Capital Outlay For Equipment. From chlorinators, filters, softeners to meters, pumps and controllers, we can provide most any equipment needed to bring your system up to good safe operating condition. All this can be included with our monthly service fee.

No Parts And Labor Expense. Since Water Technology owns and maintains our equipment, there won't be any money spent by you to keep it going.

Results based water management program.

Licensed Operators—State Certified Laboratory

Water Technology of the Ozarks offers contract-operating service on public water supplies by an A level licensed operator. Since everyone's needs differ, we design a program specifically for your facility. This includes community and non-community systems.

A number of levels of operating service are available. We will furnish and supply all of the chemical treatments required and mix chemicals for proper application strength, test chlorine levels at various sample points in the distribution system to insure sufficient levels for complete disinfection and perform all bacteria testing as specified by the DNR

Samples will be taken on the frequency determined by the DNR and tested in our State Certified Laboratory or by the appropriate state laboratory facility. Routine maintenance of all Water Technology of the Ozarks' owned equipment will be performed to insure peak operating efficiency, and Client will be advised if and "Client owned" equipment needs service.

Meter Reading And Billing Service

Water Technology of the Ozarks offers a meter reading and billing service. Monthly water bills are produced by computer from information downloaded from a palm pilot, which contains the water meter readings obtained by the meter reader. The amounts for the water used are automatically calculated and cards are printed and mailed to the customer. This program can be customized to meet the water system's requirements.
